

Clearwell E-Discovery Platform[®]

The Clearwell E-Discovery Platform is an enterprise-class e-discovery solution that enables enterprises, governments, and law firms to manage all of their legal, regulatory, and investigative matters with a single, easy-to-use application. Purpose-built to support the iterative workflows of e-discovery, Clearwell makes it easy for attorneys, litigation support professionals, and security teams to defensibly solve real-world challenges throughout the entire e-discovery lifecycle from identification and collection through review and production.

Rated as a "Strong Positive" (highest rating) in Gartner's 2008 and 2009 E-Discovery MarketScope Reports, Clearwell provides a single product for the identification, collection, processing, analysis, review, and production phases of e-discovery that dramatically reduces the cost, time, and complexity of e-discovery. Whether deployed within the corporation or hosted by a Clearwell certified service provider, the Clearwell E-Discovery Platform:

1. Delivers forensically sound internal collection capabilities that enable IT or Legal teams to easily identify and collect from all critical data sources

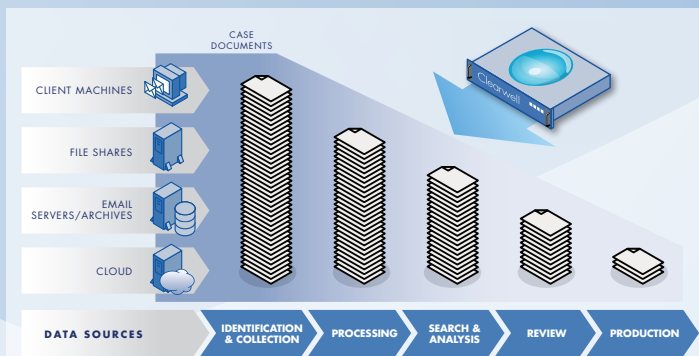

2. Accelerates document processing, allowing users to gain immediate visibility into case facts and estimate the size and cost of e-discovery

3. Brings a new level of transparency to e-discovery search, enabling a more collaborative and defensible process

4. Delivers interactive analysis and culling capabilities to prune large datasets to much smaller, more relevant ones

5. Offers a flexible end-to-end e-discovery workflow, from identification and collection to review and production, eliminating the costly movement of data across multiple, disparate tools

6. Provides comprehensive case management, auditing, and reporting capabilities, enabling users to monitor case progress in real-time across the entire e-discovery lifecycle

Clearwell E-Discovery Platform:

Up and running quickly, Clearwell provides a single, integrated platform for end-to-end e-discovery, from identification through production.

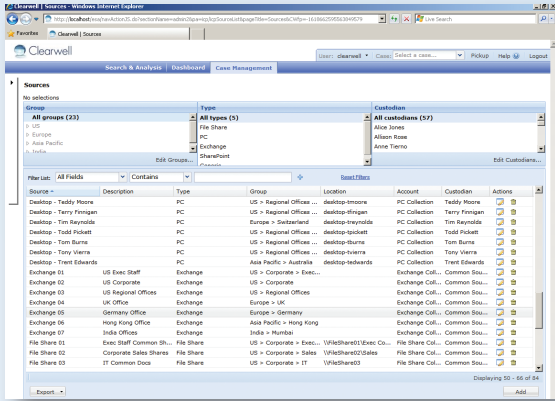

Clearwell E-Discovery Platform Features

The Clearwell E-Discovery Platform is available as an easy to administer physical or virtual appliance that is up and running quickly with minimal IT resources. Since the product's web-based interface is extremely intuitive and user-friendly, most attorneys, litigation support professionals, and IT security teams are productive immediately with minimal training. As an end-to-end e-discovery solution, it allows users to streamline their entire e-discovery process from identification and collection through production with a single platform.

1. IDENTIFICATION & COLLECTION

Interactive Data Map: Maintains an interactive catalog of data sources and custodians, providing visibility into accessibility of data prior to collection.

Interactive Data Map: Provides an intuitive iTunes-like picker to identify enterprise data sources and custodians prior to collection.

Network Collector: Enables remote collection from 50+ critical data source types over the network.

On-Site Collector: Facilitates secure on-site collection from laptops, PCs, and file shares onto any standard USB drive or file share.

Collection Scheduler: Schedules network collections to run once or on a recurring basis to collect new or modified data.

Data Verification: Automatically verifies the integrity of collected data before and after collection, ensuring each collection is forensically sound.

Collection Analytics: Provides a visual summary of the volume and type of data by custodian, enabling analysis and verification of collected data.

Collection History: Records collection details for every data source, including the volume of data collected, and the time and status of the collection.

Collection Management Console: Centralizes all collection information into a single view, including file volumes, custodians, and detailed data sources.

2. PROCESSING

Advanced Pre-Processing Filters: Enables users to interactively filter data by custodian, date, strong file type, and file size prior to processing.

Pre-Processing Analytics: Visually summarizes overall document set characteristics and presents detailed analysis by custodian, timeline, and file type.

Rapid Processing: High-performance architecture processes and analyzes documents at rates of up to 1 TB per day.

Robust File Support: Processes and analyzes over 400 different file types, including support for OCR of images containing text.

Intelligent De-Duplication: Automatically de-duplicates data across multiple data stores and across the entire data set.

Multi-Language Support: Provides full Unicode compliance and enables automatic language identification of documents.

3. SEARCH & ANALYSIS

Transparent Keyword Search: Enables a more defensible and collaborative e-discovery search process and enhances the ability to cull irrelevant information.

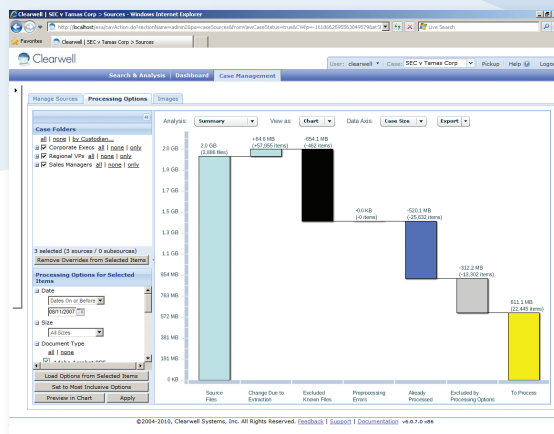

A. Keyword Search Preview: Provides matching keyword variations prior to running a search. Users can selectively include relevant variations or exclude false positive variations.

B. Keyword Search Filters: Enables real-time search result filtering for individual queries or variations and allows users to sample the filtered documents.

C. Keyword Search Report: Provides comprehensive reporting that documents all search criteria and provides detailed analytics of the results.

Multi-Keyword Search: Runs up to 100 searches simultaneously and provides reporting to test effectiveness of searches.

Advanced Search: Construct advanced searches for multiple fields using Boolean, stemming, wildcard, fuzzy, and proximity searches.

Pre-Processing Analytics: Graphically depict data volume, file types, and time frames of collected data prior to processing.

Transparent Concept Search: Delivers a set of features that enables a more defensible, interactive, and accurate concept search process:

A. Concept Search Preview: Allows users to contextually refine the concept search by previewing the most frequently occurring terms and selecting only the relevant ones.

B. Concept Search Explorer: Provides a visual interface that enables users to dynamically construct searches by exploring terms and linking them to form comprehensive and relevant concepts.

C. Concept Search Report: Concept Search Report: Automatically documents the related terms included in each concept search and provides detailed analytics of search results.

Concept Search Explorer: Enables users to dynamically construct searches by exploring terms and linking them to form comprehensive and relevant concepts.

Auto-Filters: Narrow search results using automatically-generated clickable filters that provide exact document counts.

Hit-Highlighting: Highlights search terms in messages, attachments, and files, allowing users to quickly find what they are looking for.

Discussion Threads: Links together all related messages into chronological threads that capture entire discussions, including all replies, forwards, and carbon copies.

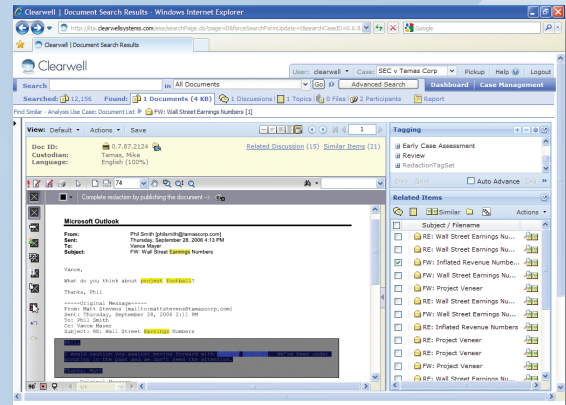

Topic Classification: Automatically organizes documents into specific topics, enabling users to quickly analyze all documents related to a particular subject.

People Analytics: Analyzes communications to generate a list of top custodians or monitor communications between regulated divisions.

Term Analytics: Leverages natural language algorithms to uncover secret project names and code words that may be relevant to a case.

4. REVIEW

Near-Native Viewer: Displays documents in a near-native format without requiring each application to be loaded on a reviewer's workstation.

Near-Native Viewer: Provides immediate access to documents in near-native formats along with hit highlighting, enabling rapid review, tagging, and redaction.

Persistent Hit Highlighting: Highlights search terms in messages, attachments, and files within the Near-Native Viewer.

Redaction: Protects privileged, work product, and privacy information with reason codes and redaction verification.

Auto-Redaction: Automatically finds and redacts keywords, phrases, and personal information, such as Social Security numbers.

Near-Duplicate Identification: Identifies and displays near-duplicates and provides automatic document comparison.

Find Similar: Finds and groups emails, attachments, and loose files with similar content to the document under review using a dynamically configurable similarity threshold.

Decision-Tree Tagging: Tags individual or sets of documents using a customizable multi-layer tree structure.

Auto-Batching: Automatically allocates documents into review folders based on either a set number of folders or a set number of documents per folder.

Concept Review: Enables users to run a Transparent Concept Search on a review set in order to prioritize documents by concept for efficient review.

Review Folder Management: Monitors the completion of review sets and see which review folders are currently checked in or out by any reviewer.

Review Workflow Template: Provides customizable tag and folder templates that encapsulate best practices from enterprises, governments, and law firms.

Related Documents: Identifies and displays related documents, such as near-duplicates, similar documents, and those contained in discussion threads and attachments.

Auto-Resume: Enables users to resume review or analysis with the exact document and screen settings displayed prior to logging off.

Review Progress Report: Shows document review progress for a case in an automatically generated graphical report.

Reviewer Productivity Report: Shows the number of documents individual or groups of reviewers have tagged over a time period.

5. PRODUCTION

Native and Image-Based Production: Allows users to produce documents in native, TIFF, PDF, and mixed mode formats.

Bates Stamping: Applies sequential numbering of documents with Bates Stamps as well as custom headers and footers.

Document Export: Delivers capability to export data in EDRM XML, DAT, and CSV formats, improving interoperability and seamless transfer of electronic data to outside parties.

Rolling Production: Enables batch productions at any point in the e-discovery process.

Load File Configurator: Provides customizable load file creation during export, eliminating the need for custom transforms prior to ingestion into third-party review applications.

6. CASE MANAGEMENT & REPORTING

Case Analytics: Delivers summary reports to monitor case progress, ensuring that resources are properly allocated and deadlines are met.

Lifecycle Reporting: Summarizes case status from collection through production in a single dashboard, enabling unparalleled visibility into every stage of e-discovery.

Lifecycle Reporting: Provides integrated dashboards and reporting for each stage in the e-discovery process from collection through production.

Multi-Case Architecture: Provides 64-bit, distributed, case-based architecture that enables the management of hundreds of cases and thousands of users.

Case Configuration: Allows case administrators to create cases, manage groups, topics, review sets, and decision tree tag structures using an intuitive, web-based interface.

User Management: Enables case administrators to manage user accounts, including user name, password, and role.

Audit Trail and Activity Reporting: Tracks user actions such as login, logout, search, tag, print, and export, providing a full, reproducible audit trail.

iClearwell: Provides instant access to the Clearwell E-Discovery Platform from any iPhone® or iPad®.
